Numerical diagnostics, interaction experiment

endpoints with diagnostics: 1000/1000

median bookkeeping IDENTITY residual = 1.74762e-05 (roundoff only, NOT a conservation test)

median $|\delta E_{\text{LL-vs-flux}}|/E_{\text{rad}}$ = 1.50112 (independent physical residual)

E_{bound} is defined as the residual that closes the balance, so the

identity above cannot be quoted as evidence of energy conservation.

Classical low-velocity model; not QED.
